(402) 540-5790 | blaine@traudt.dev | linkedin.com/in/blaine-traudt | traudt.dev | github.com/blaine-t

EDUCATION

University of Nebraska-Lincoln (UNL)

Lincoln, NE

B.S. in Computer Science; Minor in Business; Focus in Cybersecurity & Networking

May 2027

Honors: *Jeffrey S. Raikes School of Computer Science and Management*

GPA: 4.00/4.00

EXPERIENCE

Software Engineering Intern (Hardware)

May 2025 - Present

Hudl

Lincoln, NE

- Improved developer experience by optimizing usage of Docker to reduce warm compile times from **3m to 20s**
- Finalized manual control beta to open up Hudl to an estimated **\$3 million** in new revenue from soccer
- Maintained and added features to the Hudl Focus React Native app, like native game controller support
- Became the **#1** contributor in an existing Rust repository used for controlling our brand new sport cameras
- Utilized Claude Code and other AI tools to assist my workflows while practicing HITL (human-in-the-loop)

Software Engineering Intern

May 2024 - May 2025

Speedway Motors

Remote

- Improved developer experience by utilizing pnpm workspaces to reduce hot reloads from **200s to 2s** in Next.js
- Collaborated with a remote team and lead Agile Scrum ceremonies to ensure epics were met on time
- Migrated React contexts to Zustand stores to improve performance and reduce E-commerce bounce rates
- Developed .NET endpoints with GraphQL, creating industry leading experience for engine-swapped vehicles

Teaching Assistant

January 2024 - May 2025

School of Computing & Raikes School

Lincoln, NE

- Mentored and provided positive feedback to new students from different backgrounds on CS fundamentals

PROJECTS

CornCycle | *Hardware, Arduino, C, C++*

February 2025

- Won **2nd** place at Corn Hacks experimenting with Bluepad32, ESP-NOW, OpenCV, and Pygame
- Built RC Cars with ESP32s and IR LEDs that interacted with the game through an Xbox Kinect and Pico W

LISA — a Local Intelligent Student Advisor | *LLM, RAG, Intel AMX*

September 2024

- Won **2nd** place for the Red Hat Challenge at Hack Midwest 2024 utilizing Red Hat OpenShift powered by AWS
- Developed in parallel with 3 teammates over a 24-hour hackathon, managing several microservices and an LLM

Lucky Liars | *Hardware, Rust, Node, C++*

February 2024

- Won **1st** place at Corn Hacks for an AI-powered murder mystery game that generated a new story every time
- Coordinated a team of 4 people to interface between a custom API server, a Rust game, and C++ hardware
